

JHONATAN RODOLFO MORALES CARRILLO

SYSTEM ENGINEER

OVERVIEW

I'm a web developer with frontend experience in ReactJS and backend experience in NodeJS/PHP. In the last year, I've learnt Robotic Process Automation using Automation Anywhere, that makes me change the way I see software as a solution. My first objective in every development task is to pursue solutions that starts as close as possible to the root of the requirement to end in a usefull and meaningful software with added value. I add to this overview a great learning attitude to expand to new development opportunities.

EXPERIENCE

Teleperformance Colombia (junior developer)

MARCH 2020 - NOW

Developer of RPA and RDA solutions to automatize manual proceses, this developments usually requires a tool to overview functionality or to handle some functionalities integrated in the RPA solution; these tools are mostly made using ReactJS/NodeJS technologies.
